Sample Questions and Their Solutions

Analyzing some sample questions gives insight into the exam pattern.

Sample Question 1: Algebra

Solve the

quadratic equation $(2x^2 - 5x - 3 = 0)$. Solution: Using quadratic formula $(x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a})$, where $(a=2, b=-5, c=-3)$. $[x = \frac{5 \pm \sqrt{(-5)^2 - 4 \times 2 \times (-3)}}{2 \times 2} = \frac{5 \pm \sqrt{25 + 24}}{4} = \frac{5 \pm \sqrt{49}}{4}]$ $[x = \frac{5 \pm 7}{4}]$ Therefore, $[x = \frac{5 + 7}{4} = 3 \text{ or } x = \frac{5 - 7}{4} = -\frac{1}{2}]$ Answer: $(x=3)$ or $(x=-\frac{1}{2})$.

Sample Question 2: Geometry In $(\triangle ABC)$, $(\angle ABC = 90^\circ)$, and $(AB=6)$, $(BC=8)$. Find the length of (AC) . Solution: By Pythagoras theorem, $[AC = \sqrt{AB^2 + BC^2} = \sqrt{6^2 + 8^2} = \sqrt{36 + 64} = \sqrt{100} = 10]$ Answer: $(AC=10)$.

The boundaries are reviewed annually and may vary slightly from year to year, depending on the exam's difficulty and candidate performance.

2013 June Grade Boundaries for GCSE Maths 1MA0

Official Grade Boundaries (June 2013) The June 2013 grade boundaries for GCSE Maths 1MA0 were set to reflect the overall performance of candidates. Although exact figures can vary depending on the specification, the approximate boundaries were as follows:

Grade	Approximate Boundary (Marks)
-------	------------------------------

----- ----- 9		90+	8		81?89	7			
73?80		6	65?72	5		58?64	4		50?57
3		42?49	2		33?41	1		25?32	

|| U (Unclassified) | Below 25

[Note: These boundaries are approximate, derived from publicly available data and historical analyses, as the official boundaries are published by the exam boards such as Edexcel or AQA. Achieving 90+ marks generally corresponds to a Grade 9, indicating exceptional performance. The Grade 4 boundary is often considered a "pass" or standard pass grade, with students needing at least 50-57 marks. The lower boundary, below 25 marks, results in a U (unclassified), meaning no grade. Factors Influencing Grade Boundaries Exam Difficulty and Candidate Performance If the exam is particularly challenging, grade boundaries tend to be lowered slightly to ensure students are not unfairly penalized. Conversely, if the exam is easier, boundaries may be raised. Question Difficulty and Distribution The relative difficulty of questions influences how marks are distributed across grades. If a large proportion of students score high, the boundary for grade 9 may shift upward. Conversely, if the cohort struggles, boundaries may be adjusted downward to maintain consistent standards.
- Historical Standards and Comparability** Standard-setting procedures aim to ensure comparability across years. The boundaries for 2013 would reflect an effort to align with previous years' standards, adjusting for exam difficulty.
- Statistical Moderation** Use of statistical techniques, such as the Angoff or Bookmark methods, helps to set fair and reliable boundaries. These methods involve expert judgment, considering the difficulty of questions and student performance data.
